

Ogden Surgical and Medical Society
15 May 2024 – *Patient Safety*

We are irrational humans- a source of
medicine's flaws/failures

Alan H. Morris, M.D.

furnished with the senses, so as to be
impressed with the *properties of*
things...acquires a degree of
knowledge.

John Hunter

V Johnson. A History of the Ogden Surgical-
Medical Society 1946-2005

Preface:

Human cognitive and behavioral challenges impede clinicians from achieving their decision-making goals

I have unbridled respect for clinicians

Physicians often do a remarkable job under almost impossible circumstances

Subjects for Discussion:

Human limitations

Need models/tools → desired actions

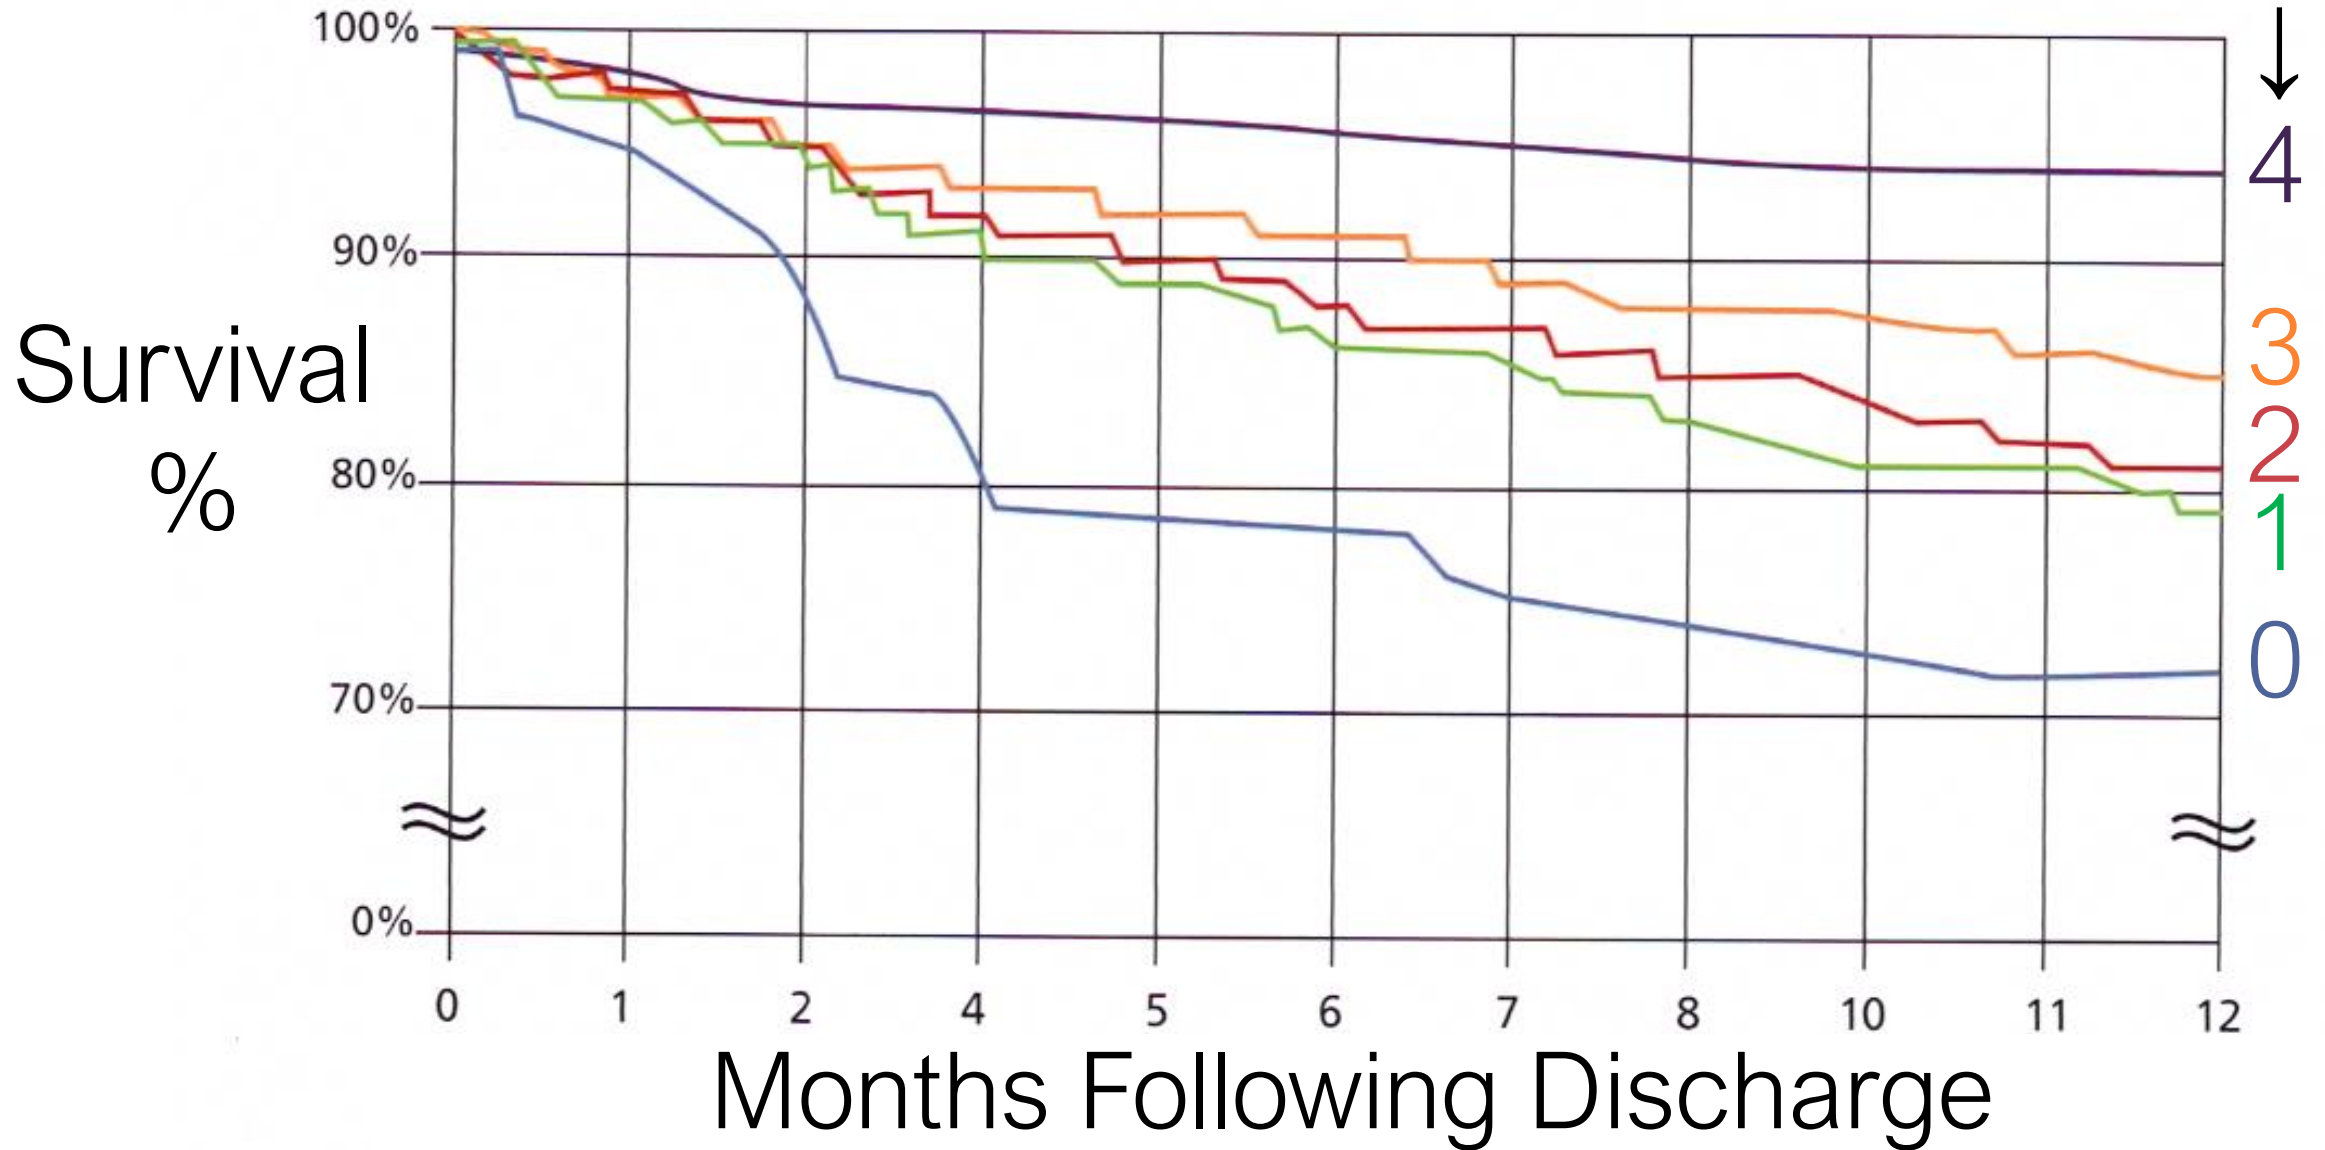

A partial cure with *eActions*
(computerized replicable methods)

Human limitations

Goal:

Make the evidence-based decision the first time and every time.

Adherence to Heart Failure Core Measures

(Kfoury, French – Updated, Intermountain Nov 2008); Kfoury AG, French TK, Horne BD, et al. Incremental survival benefit with adherence to standardized heart failure core measures: a performance evaluation study of 2958 patients. *J Card Fail.* 2008;14(2):95-102.

How good are we?

389 children evaluated

Referral rate: **45%**

175 remaining children

Referral rate: **46%**

80 remaining children

Referral rate: **44%**

MD Compliance with Guidelines/Evidence:

| | | % |
|---|-----------------|---------|
| Gout | 10 studies | = 3-71 |
| Mechanical Ventilation Lung protective | | = 65 |
| Surviving Sepsis Campaign Bundle | | = 15-20 |
| ED Hepatic Encephalopathy ≤ 24 hrs | | = 22 |
| Outpatient Parenteral Antibiotics (VAH) | | = 20 |
| | with ID consult | = 54 |
| Canadian PCP for 13 CKD Quality | | = 18-86 |

Intermountain Stories 5 March, 2018

with all we know about how to give the best evidence-based care to patients, ***we do it maybe 40 percent of the time***

An Introduction to Error Analysis

The Study of Uncertainties in Physical Measurements

John R. Taylor

Signal-to-noise ratio for many issues we explore is small and requires careful, systematic study - not obvious like this accident.

Taylor JR. An introduction to error analysis : the study of uncertainties in physical measurements. Mill Valley, Calif.: University Science Books; 1982

it all starts from our senses

Polanía R, Burdakov D, Hare TA. Rationality, preferences, and emotions with biological constraints: it all starts from our senses.

Trends Cognit Sci. 2024.

Biological information processing costly (energy)

Sensing-output systems, like brain have noisy communication channels: Always lose information

Senses should adapt to sensory-input-maximizing rules at earliest processing [*adjust sensory input*]

Senses not to enrich subjective experience, but to
↑ species survival

Representing the world as accurately as possible
probably not the purpose of senses

Avoid Lion and
evolve

Provide *evidence-based treatment*
the first and every
time.

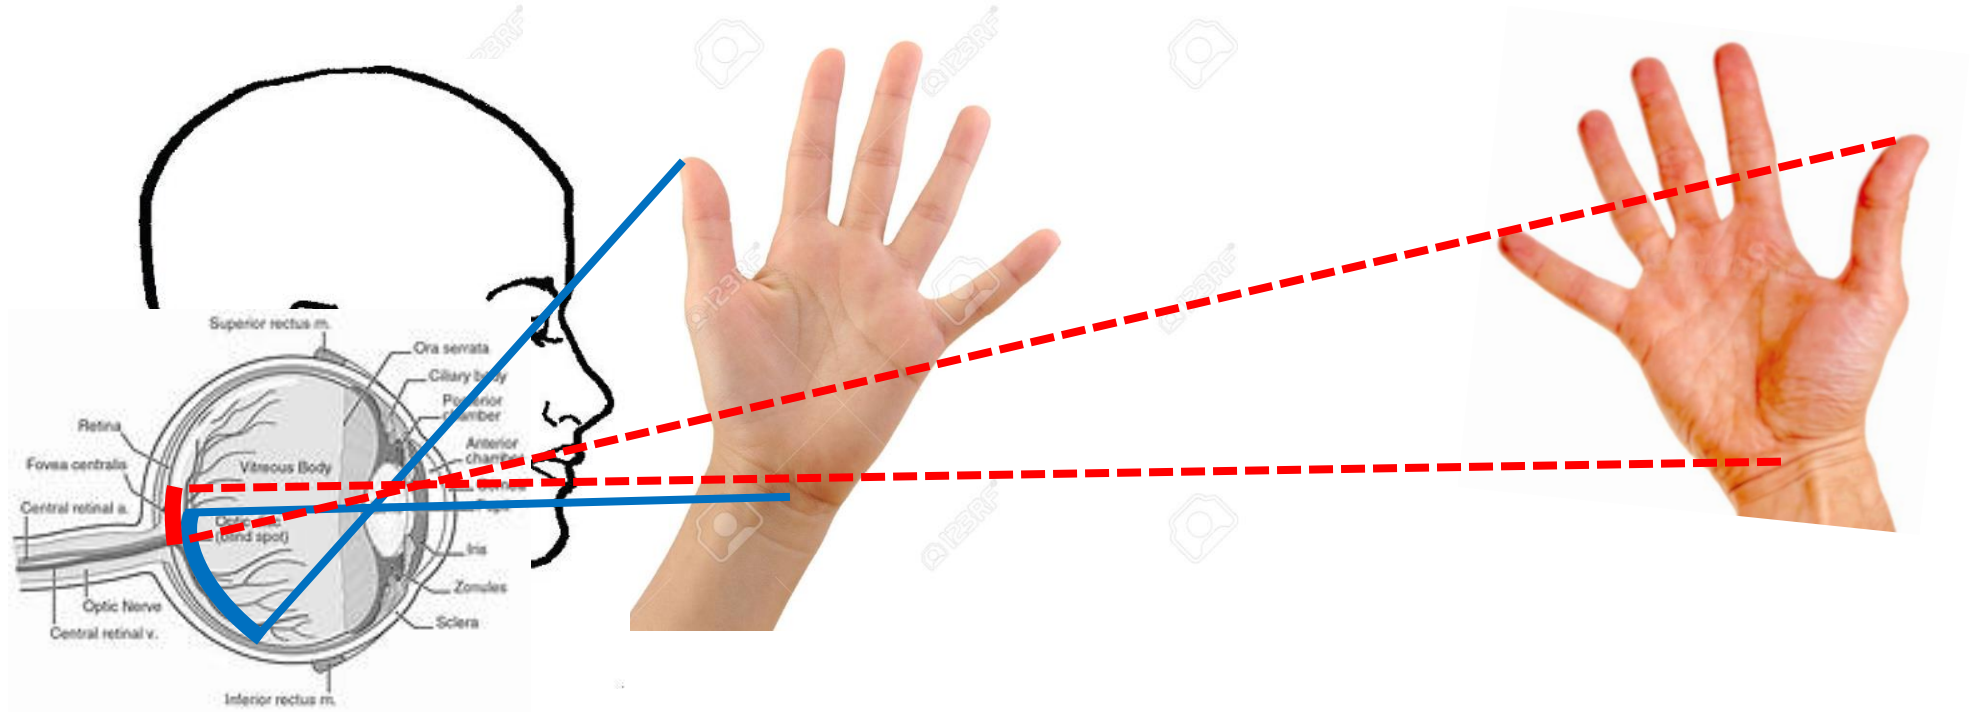

Recognize
patterns

Accurately sense
and interpret the
world

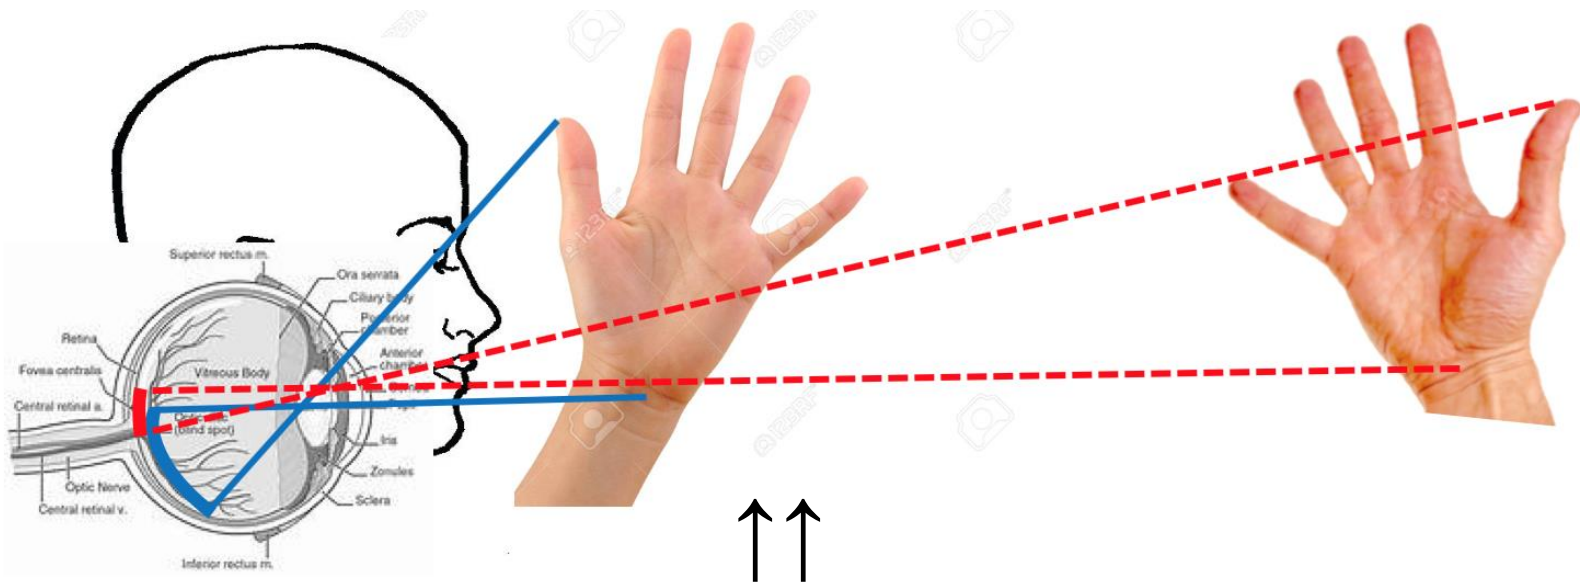

Inverse Square Law: size $\propto 1/d^2$

Camera at the eye

Retinal Image
we **"See"**

Image our **Brain "Perceives"** - We see
the World through Internal Models

Science:
describe the world *as it is*,
not as we *perceive it*

iPad 2
Your iPad is even more powerful in the hands of a teacher.

How good are our perceptions for identifying credible evidence?

If we were honest about the *shortcomings of human physiology* the “optical illusions” would instead be labeled “*brain failures.*”

Neil deGrasse Tyson

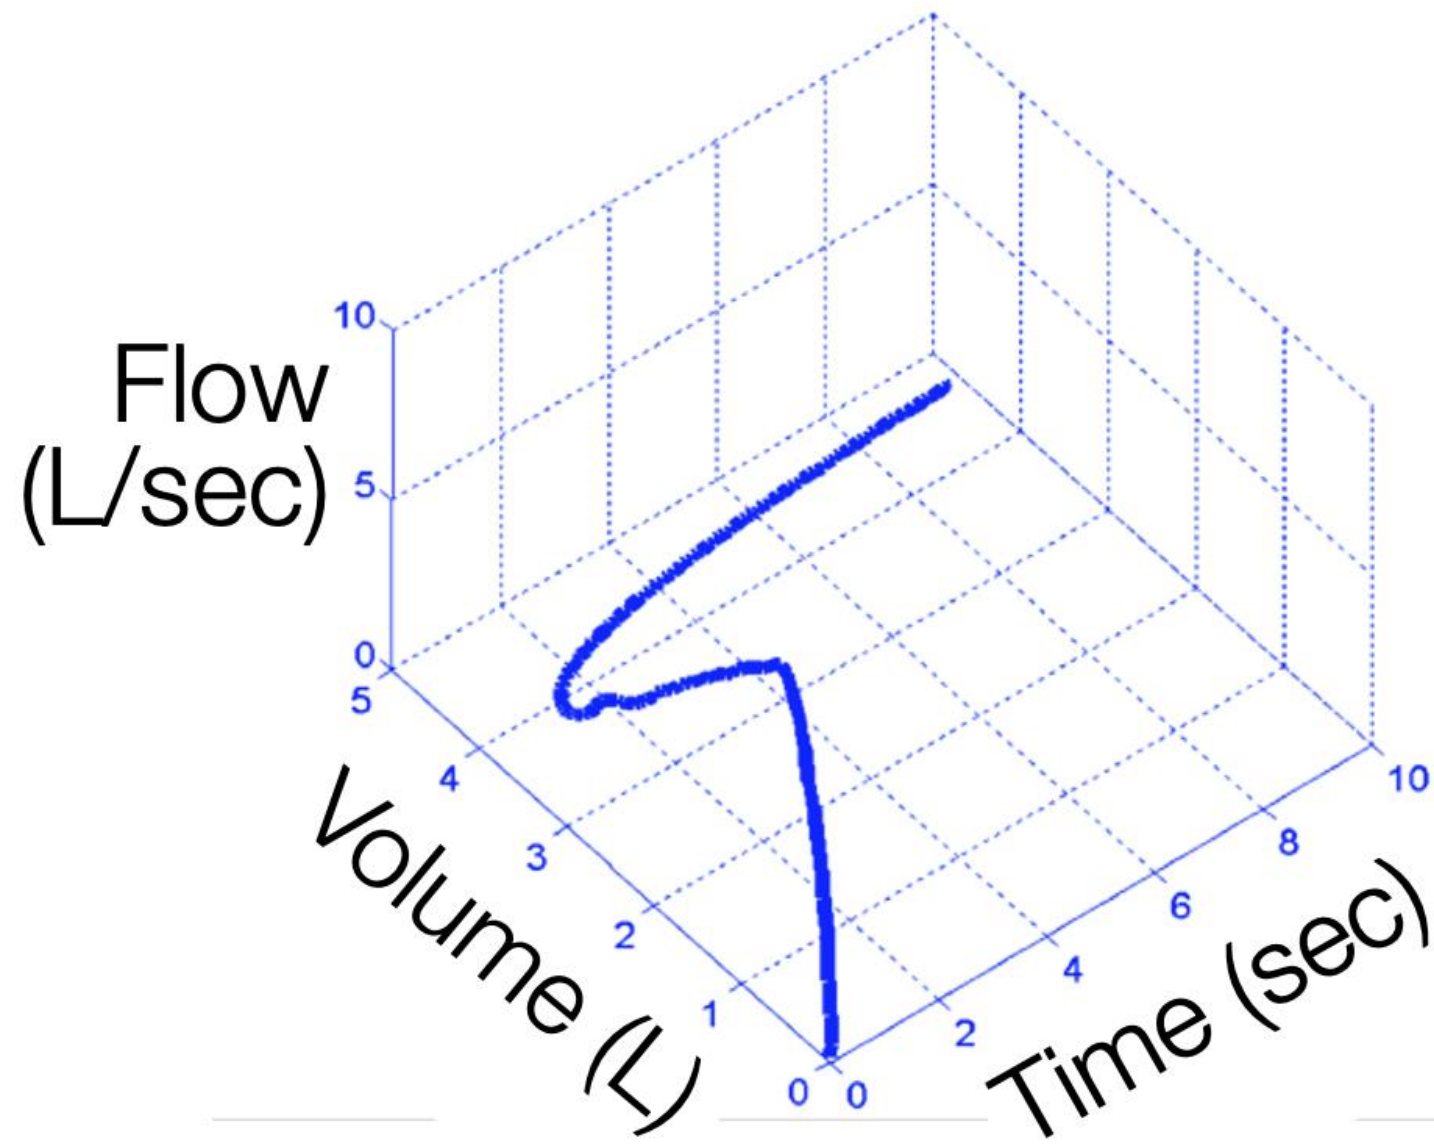

Human limitations

Need models/tools → desired actions

A partial cure with *eActions*
(computerized replicable methods)

Clinical medicine always required
doctors to handle enormous
amounts of data

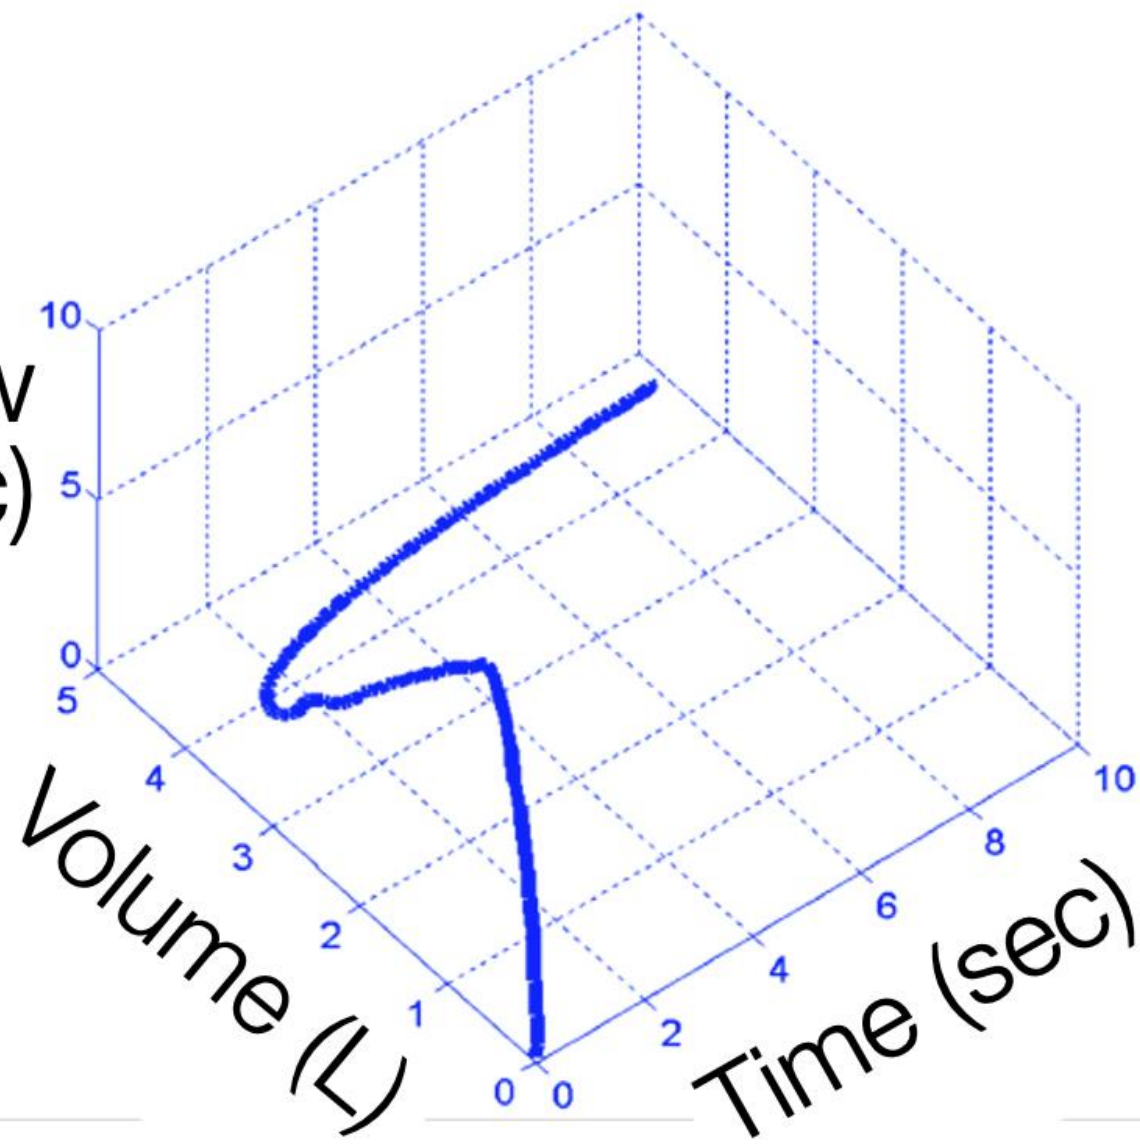

Ability to **manage** complexity sets
good doctors apart from the rest.
